1. Introduction

Top Energy Limited (Top Energy) is subject to price-quality regulation under Part 4 of the Commerce Act 1986. The Commerce Commission has set a Default Price-Quality Path (DPP) which applies to Top Energy from 1 April 2020.

This annual compliance statement is published in accordance with clause 11.4 of the 2020 DPP Determination and applies to the fourth assessment period, commencing 1 April 2023 and ending 31 March 2024.

This statement confirms that Top Energy:

- Complies with the requirement to calculate the wash-up amount for the assessment period (section 3)
- Does comply with the quality standards for the assessment period (section 4); and
- Has not entered into any agreement with another EDB or Transpower for an amalgamation, merger, major transaction or non-reopener transaction in the assessment period (section 5)

A copy is available on Top Energy's website www.topenergy.co.nz

2. Date prepared

This statement was prepared on 28 August 2024.

3. Wash-up amount

3.1 Statement of Compliance

As demonstrated in Table 1 in Section 3.2, and consistent with clause 8.6 of the 2020 DPP Determination, Top Energy has complied with the wash-up amount calculation for the fourth assessment period.

The wash-up amount for the 2024 assessment period will be included in the calculation of allowable revenue and price-setting for the 2025 assessment period, beginning 1 April 2025. The wash-up amount is included in the calculation of allowable revenue two years after the relevant revenue assessment period.

For presentation purposes the tables set out in this document are aggregates of the price and quantity information. While dollar balances are rounded to the nearest thousand dollars, the underlying compliance calculations apply to the whole number.

3.2 Wash-up amount calculation

Table 1

| Wash-up amount RY24 | | | |
|--|---|---------------|--|
| Term | Description | Value (\$000) | |
| Actual allowable revenue (AAR) | Sum of actual net allowable revenue, actual pass-through and recoverable costs, pass-through balance and revenue wash-up draw down amount | 53,210 | |
| Actual revenue (AR) | Sum of actual revenue from prices plus other regulated income | 43,131 | |
| Actual net allowable revenue x (revenue reduction percentage - 20%) when revenue reduction percentage is greater than 20%, otherwise nil | | - | |
| Wash-up amount | AAR - AR - RV | 10,079 | |

Further information supporting actual allowable revenue is included in Section 3.2.1. Further information supporting actual revenue is included in Section 3.2.2.

Further information supporting revenue foregone is included in Section 3.3.3.

3.2.1 Actual allowable revenue

Table 2 below shows the actual allowable revenue for the assessment period consistent with Schedule 1.6 of the 2020 DPP Determination.

The actual allowable revenue is the actual net allowable revenue plus pass-through and recoverable costs, any wash-up draw down amount and pass-through balance (PTB), that Top Energy can earn in an assessment period.

Table 2

| Actual allowable revenue RY24 | | | |
|-------------------------------------|---|--------|--|
| Term | Value (\$000) | | |
| Actual net allowable revenue (ANAR) | Actual net allowable revenue as set out in in Schedule 1.6 (3) for the period ending 31 March 2024 | 45,046 | |
| Actual pass through costs | Actual pass-through costs and Actual recoverable costs | 340 | |
| Actual recoverable costs | Actual recoverable costs, excluding any recoverable cost that is a revenue wash-up drawn down amount | 7,342 | |
| Revenue wash-up draw down amount | The opening wash-up account balance for the fourth assessment period of the DPP regulatory period is the closing wash-up account balance for the previous assessment period as set out in Schedule 1.7 (1)(b) | 482 | |
| Pass-through balance allowance | (ePTB - Pass-through balance) x (1 + 67th percentile estimate of post-tax WACC)^2 | - | |
| Actual allowable revenue (AAR) | Actual net allowable revenue + actual pass- through costs and actual recoverable costs | 53,210 | |

Further information supporting actual pass-through costs, actual recoverable costs and the pass through balance is included in Appendix A.

3.2.2 Actual revenue

Table 3 below shows actual revenue for the assessment period consistent with clause 4.2 of the 2020 DPP Determination.

Appendix B contains the schedules of prices and quantities used to calculate actual revenue from prices. This schedule shows that Top Energy recovered \$427k higher revenue from prices, including prior period washups, than the forecast revenue from prices.

Table 3

| Actual revenue from prices RY24 | | | |
|---|---|---------------|--|
| Term | Description | Value (\$000) | |
| Actual revenue from prices (ΣΡ _{2023/24} *Q _{2023/24}) | Actual prices between 1 April 2023 and 31 March 2024 multiplied by actual quantities for the period ending 31 March 2024 | 43,444 | |
| Prior period wash-ups | Prior year revisions that are receipted in the current year | 44 | |
| Gains and Losses | Gain or loss on disposed assets | (377) | |
| Other Income | Other regulated income as defined in the IM determination | 21 | |
| Total Actual revenue (AR) | | 43,131 | |

Further information supporting actual revenue from prices and Prior period wash-ups is included in Appendix B.

3.2.3 Revenue foregone

The revenue forgone component of the wash up calculation places a cap on the amount of revenue that can recovered through the wash-up mechanism if there is a reduction in revenue from prices relative to forecast of more than 20%.

Table 4 below shows the revenue foregone consistent with clause 4.2 of the 2020 DPP Determination. Revenue forgone is Nil as the variance to forecast is < 20 %.

Table 4

| Revenue Forgone RY24 | | | |
|-------------------------------------|--|--------|--|
| Term | Value (\$000) | | |
| Actual net allowable revenue (ANAR) | Actual net allowable revenue as set out in in Schedule 1.6 (3) for the period ending 31 March 2024 | 45,046 | |
| Revenue reduction percentage (RRP) | 1 - (actual revenue from prices / forecast revenue from prices) | -1.84% | |
| Revenue foregone (RV) | Actual net allowable revenue x (RRP- 20%) when RRP is greater than 20%, otherwise nil | - | |

4. Quality standards

4.1 Statement of compliance with planned interruptions quality standards

Top Energy is subject to a planned accumulated SAIDI limit and a planned accumulated SAIFI limit which are assessed for the DPP regulatory period as stated in clause 9.2 of the 2020 DPP Determination.

Table 5 and Table 6 below show the planned accumulated SAIDI and SAIFI limits for Top Energy for the DPP regulatory period and the planned SAIDI and SAIFI assessed values for the first, second and third and fourth assessment period.

Table 5

| Planned interruptions quality standard - SAIDI | | | |
|--|-----------|--|--|
| Sum of planned SAIDI assessed values ≤ Planned accumulated SAIDI limit | | | |
| Planned accumulated SAIDI limit 1905.36 | | | |
| Planned SAIDI assessed value for the first assessment period | 99.21 | | |
| Planned SAIDI assessed value for the second assessment period | 113.56 | | |
| Planned SAIDI assessed value for the third assessment period | 97.23 | | |
| Planned SAIDI assessed value for the fourth assessment period | 174.91 | | |
| Compliance result | Compliant | | |

Table 6

| Planned interruptions quality standard - SAIFI | | |
|--|-----------|--|
| Sum of planned SAIFI assessed values ≤ Planned accumulated SAIFI limit | | |
| Planned accumulated SAIFI limit | 7.7526 | |
| Planned SAIFI assessed value for the first assessment period | 0.82 | |
| Planned SAIFI assessed value for the second assessment period | 0.97 | |
| Planned SAIFI assessed value for the third assessment period | 0.70 | |
| Planned SAIFI assessed value for the fourth assessment period | 1.17 | |
| Compliance result | Compliant | |

Further information supporting planned SAIDI and SAIFI assessed values is included in Section 4.1.1.

4.1.1 Planned SAIDI and SAIFI assessed values

Table 7 and Table 8 below show Top Energy's planned SAIDI and SAIFI assessed values for the assessment period.

Table 7

| Planned SAIDI assessed value RY24 | | | | |
|--|---|--------|--|--|
| Term | Description | Value | | |
| Class B non-notified interruptions | | 21.10 | | |
| Class B notified interruptions falling outside window | | 13.40 | | |
| SAIDIs | Sum of Class B non- notified interruptions | 34.50 | | |
| Class B notified interruptions falling inside window | | 280.10 | | |
| Class B intended interruptions cancelled without notice | | 0.72 | | |
| Class B intended interruptions cancelled with notice | | - | | |
| SAIDIN | Sum of Class B notified interruptions | 280.82 | | |
| Planned SAIDI assessed value | SAIDIs + (SAIDIn/2) | 174.91 | | |

Table 8

| Planned SAIFI assessed value RY24 | | | |
|-----------------------------------|--|-------|--|
| Term Description | | Value | |
| Planned SAIFI assessed value | Sum of Class B interruptions commencing within the assessment period | 1.17 | |

4.2 Statement of compliance with unplanned interruptions quality standards

Table 9 and Table 10 below show that Top Energy has complied with the unplanned interruptions quality standard in clause 9.7 of the 2020 DPP Determination.

Table 9

| Unplanned interruptions quality standard RY24 - SAIDI Unplanned SAIDI assessed value ≤ Unplanned SAIDI limit | | | |
|--|---|-----------|--|
| Unplanned SAIDI limit | 380.24 | | |
| Unplanned SAIDI assessed value | Sum of normalised SAIDI values for Class C interruptions commencing within the assessment period | 292.29 | |
| Compliance result | | Compliant | |

Table 10

| Unplanned interruptions quality standard RY24 - SAIFI | | | |
|--|---|-----------|--|
| Unplanned SAIFI assessed value ≤ Unplanned SAIFI limit | | | |
| Unplanned SAIFI limit | 5.0732 | | |
| Unplanned SAIFI assessed value | Sum of normalised SAIFI values for Class C interruptions commencing within the assessment period | 3.31 | |
| Compliance result | | Compliant | |

Information about policies, procedures and calculations for measuring planned and unplanned interruptions during the assessment period is in Appendix C.

4.2.1 Major events

Table 11 and Table 12 below show the SAIDI and SAIFI values attributed to major events which occurred during the assessment period.

Further information about major events is included in Appendix D.

Table 11

| Unplanned SAIDI major events RY24 | | | |
|-----------------------------------|------------------------|--------------------------------------|-------------------------------|
| Start | End | Pre-normalised unplanned SAIDI | Normalised unplanned SAIDI |
| 29/04/2023 7:00:00 am | 1/05/2023 6:00:00 am | 61.30 | 8.28 |
| 28/10/2023 7:00:00 pm | 30/10/2023 11:30:00 pm | 101.22 | 9.57 |

Table 12

| Unplanned SAIFI major events RY24 | | | | | | | | | | |
|-----------------------------------|---------------------------|--------------------------------------|-------------------------------|--|--|--|--|--|--|--|
| Start | End | Pre-normalised unplanned SAIFI | Normalised unplanned SAIFI | | | | | | | |
| 29/04/2023 7:00:00 pm | 30/04/2023 10:00:00 pm | 0.2436 | 0.0554 | | | | | | | |
| 28/10/2023 11:30:00 pm | 30/10/2023 5:00:00 pm | 0.3405 | 0.0714 | | | | | | | |

4.3 Statement of compliance with extreme event standard

As demonstrated in Table 13 below, and consistent with clause 9.9 of the 2020 DPP Determination Top Energy has complied with the extreme event standard.

Table 13

| Extreme e | Extreme event standard RY24 | | | | | | | | |
|---|-----------------------------|--|--|--|--|--|--|--|--|
| Unplanned SAIDI value ≤ 120 minutes, and customer interruption minutes ≤ six million during any 24-hour period, excluding unplanned interruptions from major external factors | | | | | | | | | |
| Number of extreme events | Compliance result | | | | | | | | |
| nil | Compliant | | | | | | | | |

4.4 Quality Incentive Adjustment

Table 14 below shows Top Energy quality incentive adjustment for the assessment period.

Table 14

| Q | Quality Incentive Adjustment RY24 | | | | | | | | | | |
|---|---|---------------|--|--|--|--|--|--|--|--|--|
| Term | Description | Value (\$000) | | | | | | | | | |
| SAIDI planned adjustment | (SAIDI planned, target - SAIDI planned, assessed) x 0.5 x IR | -\$78.611 | | | | | | | | | |
| SAIDI unplanned adjustment | (SAIDI unplanned, target - SAIDI unplanned, assessed) x IR | \$32.403 | | | | | | | | | |
| Total adjustment | SAIDI planned adjustment + SAIDI unplanned adjustment | -\$46.208 | | | | | | | | | |
| Revenue at risk | 0.02 * ANAR | \$900.923 | | | | | | | | | |
| Total reward | | -\$46.208 | | | | | | | | | |
| 67th percentile estimate of post- tax WACC | | 4.23% | | | | | | | | | |
| Quality incentive adjustment | | -\$50.200 | | | | | | | | | |

Table 15 below shows Top Energy's quality incentive adjustment inputs consistent with Schedule 4 of the 2020 DPP Determination.

Table 15

| Quality Incentive Adjustment Inputs RY24 | | | | | | | | | | | |
|---|---------|-----------|---|---------|----------|--|--|--|--|--|--|

| SAIDI planned adjustment \$0 | | -\$78,611 | SAIDI planned adjustment | \$0 | \$32,403 | | | | | | |

5. Transactions

Top Energy has not entered into any agreement with another EDB or Transpower for an amalgamation, merger major transaction or non-reopener transaction in the assessment period.

6. Director's certification

A Director's certificate in the form set out in Schedule 7 of the 2020 DPP Determination is included as Appendix E.

7. Assurance report

An assurance report meeting the requirements of Schedule 8 of the 2020 DPP Determination is included in Appendix F.

Appendix A – Pass-through and recoverable costs

Table 16 and 17 compare the forecast pass through and recoverable costs used to set forecast allowable revenue for the assessment period, to the actual pass-though and recoverable costs used to determine actual allowable revenue.

These costs for the assessment period were forecast by Top Energy in December 2022 as part of the company's annual pricing process. For the 2024 assessment period the actual pass-through and recoverable costs incurred were \$53k less than forecast.

Pass-through costs

Table 16

| Passthrough Costs for year endi | ng March 2024 | | | | |

• PROCESS SUMMARY

The Top Energy Network Control Centre (TECC) records all customer outages using an Advanced Distribution Management System (ADMS) - GE Power On Advantage. Outages are classified as either Unplanned when a fault occurs on the Network or Planned when customers are notified in advance of a scheduled outage. All outages are posted on the Top Energy Outage Centre website which also sends outage notifications and restoration updates directly to Electricity Retailers and subscribed customers via a mobile App. All Network reliability performance data is sourced from the ADMS Outage Reports.

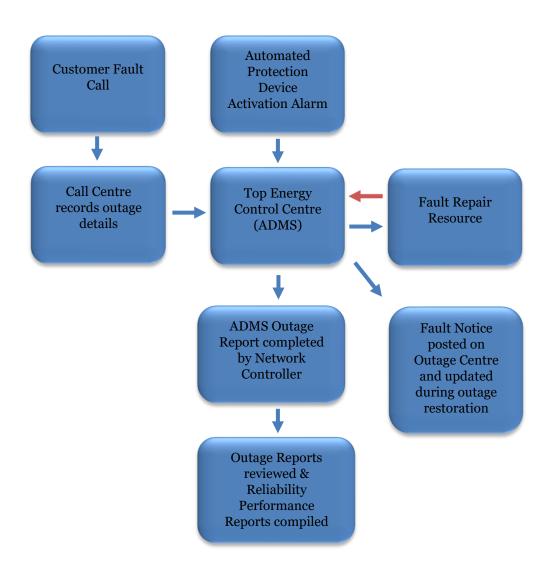

UNPLANNED OUTAGES

Unplanned outages can be initiated by 2 types of events which determine the outage start time used:

- 1. Customer Fault Call received by the Call Centre start time is the Call record entry time;
- 2. Automated Protection Device Activation Alarm start time is the Device operation time.

Fault Call details are entered into the Call Management System by the Call Centre Operators who identify key information about the fault and record the contact details of the Caller. A Network Controller in the TECC reviews the Fault Call details and creates an outage Incident in the ADMS.

Automated Protection Device initiated faults automatically trigger the creation an outage Incident in the ADMS. The Fault Dispatcher or Network Controller may dispatch a fault-crew resource directly or via the Contractor's Faults Supervisor. A Fault Notice is posted on the Outage Centre website and is updated during the Incident as the supply to customers is restored. Once all supply has been restored a Network Controller completes an Incident Outage Report.

Interruption to Unplanned Outage Response or Repair

- For unplanned outages where the fault response resource is under the control of a third party or obstructed from attending and resolving the fault, the field resource will notify the Network Controller of the time of the obstruction affected our ability to respond and the time we were able to recommence the response. Those times will be recorded in the ADMS and the field switching sheet. The outage minute count will stop upon notification of obstruction and commence when we are back in the position we were prior to the notification of obstruction and able to resume from that point. (Examples of obstructions are lack of access to fault sites due to Civil Defence, Road Authority, Police, Emergency Services, or Worksafe NZ in control of site preventing faults response access etc.);
- For unplanned outages where our fault response resource is stood down due to safety issues including weather conditions or environment (e.g. extreme weather, terrain, remoteness, darkness, or fatigue etc). The outage minute count will stop when field resource notifies the Network Controller of the decision to stop to manage safety risks and will recommence once the fault response resource is back in the same position prior to the notification of the stop to manage safety and able to resume from that point. This may include suspension of restoration and or repairs until an agreed safety plan can be agreed and implemented;
- For unplanned outages where customers notify that they do not wish for power to be restored until a later agreed time or date or deny access to their property or agree to be left without supply until an agreed commencement time, then the same principles for reporting outage minutes apply as for site obstruction.

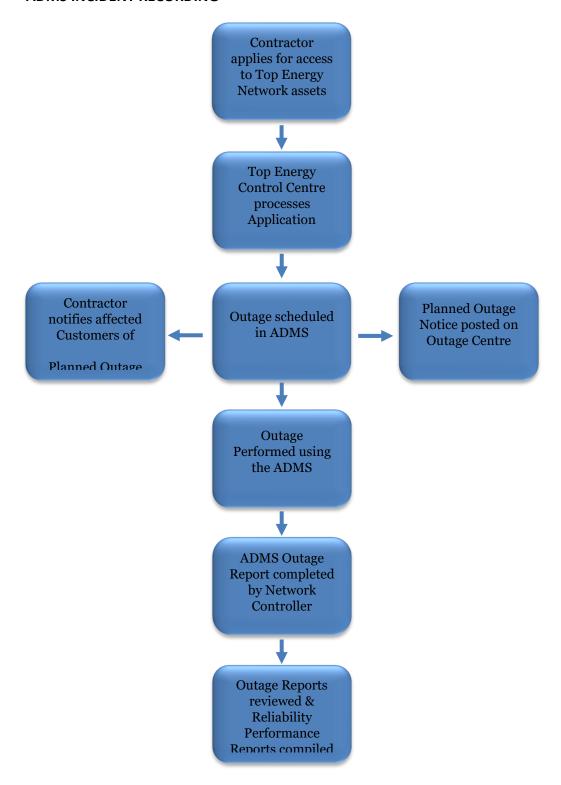

Only high voltage assets owned and operated by Top Energy are included in SAIDI calculations. Serviceability is defined by the customer's ability to receive line function services and at their point of supply/Network connection (ICP).

PLANNED OUTAGES

Planned outages are managed by the Control Centre which:

- 1. approves scheduling of work/outages applied for by the field Contractor;
- 2. creates a precompiled Switching Procedure for the outage;
- 3. posts a planned outage notice on the Outage Centre which is updated during outage restoration;
- 4. conducts and coordinates the planned switching on the network;
- 5. records network device operation times and affected ICPs in the ADMS used for outage reporting.

ADMS INCIDENT RECORDING

All outages on the Top Energy Network are recorded as Incidents in the ADMS Outage Management System (OMS). The OMS runs traces on its Network model to identify the ICPs affected during an Incident. The outage minutes for each network device operation are determined by tracing/counting the ICPs affected and calculating the duration of that outage restoration stage.

The customer minutes lost (CML) for an Incident is the sum of the outage minutes for each outage restoration stage:

CML = Σ (ICP count Stage 1 x Duration Stage 1) + (ICP count Stage 2 x Duration Stage 2) +.... (and so on for each stage)

The SAIFI figure for each incident is calculated using the total number of ICPs affected. Repeat interruptions of supply to an ICP during an incident are not counted in the recorded SAIFI total.

Top Energy maintains an ICP database (Club ICP) which is based on the industry-maintained Registry equivalent. The ICP database is maintained consistently in compliance with relevant Rules and Regulations. The ICP data is sourced from the Electricity Registry and updated in the database each day. An automated process runs daily which compares the ICP data from Club ICP to the ADMS customer records and performs any required updates/deletions/insertions.

A Network connectivity model is maintained in the Geographical Information System (GIS). Updates to the GIS connectivity model are applied as patches to the ADMS Network Model. A trace is run through the GIS Network connectivity model that gathers the total ICPs per feeder. The trace results are compared against the previous days trace and outputted into a report showing the difference between the two traces, categorized by feeder. The report is e-mailed to the GIS Manager each morning and reviewed. If there is a significant ICP difference the connectivity of the feeder is further investigated in GIS, and when remedied the trace is rerun manually.

In addition, a weekly trace is run to ensure number of ICPs in Club ICP database matches number of ICPs connected in GIS by the GIS Administrator. The report outputs total number of ICPs in Club ICP application and the total number of ICPs in GIS, the difference between the two databases categorised by feeders. The report also lists ICP numbers which are not placed in GIS. This report is reviewed and rectified by GIS Technician as appropriate.

For disclosure purposes the average of the Total ICP counts at 31 March year start and 31 March year end are used. The average ICP count for the assessment period is calculated as the sum of the ICP Count at the end of the previous assessment period (31 March) and the ICP count at the end of the current assessment period (31 March), divided by 2.

Network reliability performance statistics (SAIDI, SAIFI etc.) are derived from the ADMS Outage Reports. The outage Incidents are reviewed monthly for reasonableness by the Control Centre Manager. The reliability statistics form part of the General Manager Network's monthly report to the Board of Directors. The statistics are summarised and reported on a six-monthly basis as part of the Company's Financial Report and are compared against targets set out in the Company's Statement of Corporate Intent.

Appendix D – SAIDI and SAIFI major events

The tables below show the normalisation of the SAIDI and SAIFI major events that took place during the assessment period, consistent with Schedule 3.2 of the 2020 DPP Determination.

Major Event Normalisation YE2024

Major event normalisation reduces the raw value to $1/48^{th}$ of the boundary value:

| Unplanned interruptions | Boundary value | Normalised Value |
|-------------------------|----------------|------------------|
| SAIDI | 27.92 | 0.581666667 |
| SAIFI | 0.2284 | 0.004758333 |

Major SAIDI and SAIFI Event 1: Storm April – May (29/4/2023 7:00am to 1/5/2023 6:00am) Severe Weather was at the end of April, beginning of May, causing multiple trees to fall on the line feeding Russell, and also triggering accelerated failure of equipment north of Waipapa.

Appendix E – Director's certificate

We, David Alexander Sullivan and Jon Edmond Nichols being directors of Top Energy Limited certify that, having made all reasonable enquiry, to the best of our knowledge and belief, the attached annual compliance statement of Top Energy Limited and related information, prepared for the purposes of the Electricity Distribution Services Default Price-Quality Path Determination 2020 has been prepared in accordance with all the relevant requirements.

J E Nichols

28 August 2024

Appendix F – Assurance report

Independent Assurance Report

To the Directors of Top Energy Limited on the Annual Compliance Statement for the assessment period ended 31 March 2024

As required by the Electricity Distribution Services Default Price-quality Path Determination 2020

The Auditor-General is the auditor of Top Energy Limited (the Company). The Auditor-General has appointed me, Jason Stachurski, using the staff and resources of Deloitte Limited, to undertake a reasonable assurance engagement, on his behalf, on whether the Annual Compliance Statement on pages 4 to 14 and 17 to 32 for the assessment period ended on 31 March 2024 has been prepared, in all material respects, in compliance with the Electricity Distribution Services Default Price-Quality Path Determination 2020 (consolidated 20 May 2020), including any applicable subsequent amendments (the 'Determination').

Opinion

In our opinion, in all material respects:

- as far as appears from our examination, the information used in the preparation of the Annual Compliance Statement has been properly extracted from the Company's accounting and other records, sourced from its financial and non-financial systems; and
- the Company has complied with clauses 11.5 and 11.6 of the Determination in preparing the Annual Compliance Statement for the assessment period ended 31 March 2024.

Basis for opinion

We conducted our engagement in accordance with the Standard on Assurance Engagements (SAE) 3100 (Revised) *Compliance Engagements*, issued by the New Zealand Auditing and Assurance Standards Board. An engagement conducted in accordance with SAE (NZ) 3100 (Revised) requires that we also comply with the International Standard on Assurance Engagements (New Zealand) 3000 (Revised) *Assurance Engagements Other Than Audits or Reviews of Historical Financial Information*.

We have obtained sufficient recorded evidence and explanations that we required to provide a basis for our opinion.

Directors' responsibilities

The directors of the Company are responsible:

- For the preparation of the Annual Compliance Statement under clause 11.4 and in accordance with the requirements in clauses 11.5 and 11.6 of the Determination.
- For the identification of risks that may threaten compliance with the clauses identified above and controls
 which will mitigate those risks and monitor ongoing compliance.

Auditor's responsibilities

Our responsibilities in terms of clause 11.5(e) and schedule 8(1)(b)(vi) and 8(1)(c) of the Determination, are to express an opinion on whether:

- as far as appears from our examination, the information used in the preparation of the Annual Compliance Statement has been properly extracted from the Company's accounting and other records, sourced from its financial and non-financial systems; and
- the Annual Compliance Statement, for the assessment period ended 31 March 2024, has been prepared, in all material respects, in accordance with the requirements in clauses 11.5 and 11.6 of the Determination.

To meet these responsibilities, we planned and performed procedures in accordance with SAE 3100 (Revised), to obtain reasonable assurance about whether the Company has complied, in all material respects, with clauses 11.5 and 11.6 of the Determination.

In relation to the wash-up amount set out in clause 8.6 of the Determination, our procedures included recalculation of the wash-up amount in accordance with schedule 1.6 of the Determination and assessing it against the amounts and disclosures contained on pages 4 to 7 of the Annual Compliance Statement.

In relation to the quality standards in clause 9 of the Determination, our procedures included examination, on a test basis, of evidence relevant to the values and disclosures contained on pages 8 to 12 of the Annual Compliance Statement.

In relation to the quality incentive adjustment set out in Schedule 4 of the Determination, our procedures included recalculation of the quality incentive adjustment in accordance with Schedule 4 of the Determination and assessing it against the amounts and disclosures contained on pages 13 to 14 of the Annual Compliance Statement.

An assurance engagement to report on the Company's compliance with the Determination involves performing procedures to obtain evidence about the compliance activity and controls implemented to meet the requirements. The procedures selected depend on our judgement, including the identification and assessment of the risks of material non-compliance with the requirements.

Inherent limitations

Because of the inherent limitations of an assurance engagement, together with the internal control structure, it is possible that fraud, error or non-compliance with clauses 11.5 and 11.6 of the Determination may occur and not be detected. A reasonable assurance engagement throughout the assessment period does not provide assurance on whether compliance with clauses 11.5 and 11.6 of the Determination will continue in the future.

Restricted use

This report is provided solely for your exclusive use and solely for the purpose of complying with Clause 11.5(e) of the Determination. However, we understand that a copy of this report has been requested by the Commerce Commission solely for the purpose above. We agree that a copy of our report may be provided to the Commerce Commission. This report is not to be used for any other purpose. We accept or assume no duty, responsibility or liability to any party, other than you, in connection with the report or this engagement including without limitation, liability for negligence in relation to the opinion expressed in our report.

Independence and quality control

We complied with the Auditor-General's:

- independence and other ethical requirements, which incorporate the requirements of Professional and Ethical Standard 1 International Code of Ethics for Assurance Practitioners (including International Independence Standards) (New Zealand) (PES 1) issued by the New Zealand Auditing and Assurance Standards Board; and
- quality management requirements, which incorporate Professional and Ethical Standard 3 Quality
 Management for Firms that perform Audits or Reviews of Financial Statements, or other Assurance or
 Related Services Engagements (PES 3) issued by the New Zealand Auditing and Assurance Standards
 Board. PES 3 requires our firm to design, implement and operate a system of quality management
 including policies or procedures regarding compliance with ethical requirements, professional
 standards and applicable legal and regulatory requirements.

The Auditor-General, and his employees, and Deloitte Limited, and its partners and employees may deal with the Company on normal terms within the ordinary course of trading activities of the Company. Other than any dealings on normal terms within the ordinary course of trading activities of the Company, this engagement, the assurance engagement on the Information Disclosures and the annual audit of the Company's financial statements, we have no relationship with or interests in the Company.

Jason Stachurski

Deloitte Limited

On behalf of the Auditor-General

Auckland, New Zealand
